EDUCATION

Bachelor of Robotics and Artificial Intelligence

Ho Chi Minh City University of Technology and Engineering

Expected Dec 2026 Ho Chi Minh City, Vietnam

GPA: 3.22/4.0

Relevant coursework: Machine Vision, Artificial Intelligence, Artificial Neural Networks, Practice of Artificial Intelligence

EXPERIENCE

Research Assistant

Robotics Lab, Ho Chi Minh City University of Technology and Engineering

Feb 2025 – Present Ho Chi Minh City, Vietnam

- Train and evaluate reinforcement learning controllers for real-time robotic systems.
- Design reward functions and tune hyperparameters for stable policies.

PROJECTS

Crazyflie-IsaacLab: RL-Tuned PID Gains for a Crazyflie Quadrotor

Python, PyTorch, PPO (rs_l_rl), NVIDIA Isaac Lab
github.com/vohongquann/Crazyflie-IsaacLab Jan 2026 – Sep 2026

- Built a four-layer flight controller (50–500 Hz) and physics-based Crazyflie model in Isaac Lab 3.0.
- Trained one PPO MLP per layer to tune 9 PID gains, reducing tracking error 23–62% versus PID (attitude: 15.5° to 5.9°).
- Anchored zero network output to the stable PID baseline and sized each MLP for STM32 deployment.

BalancingRobot-IsaacLab: Self-Balancing Robot with an RL Cascade

Python, PPO (rs_l_rl), ROS 2, ONNX, LQR, PID
github.com/vohongquann/BalancingRobot-IsaacLab Jun 2025 – Dec 2025

- Trained a PPO velocity policy that maps commands and raw IMU/encoder data to wheel torques.
- Added a frozen position policy; recorded zero falls in 768 randomized episodes and 8 mm median goal error.
- Beat LQR on speed steps: 0.026 m/s error in 0.36 s versus 0.067 m/s in 1.1 s.

RotaryPendulum-IsaacLab: Learned Cascade PID for a Rotary Inverted Pendulum

Python, PPO (rs_l_rl), NVIDIA Isaac Lab, PhysX, URDF
github.com/vohongquann/RotaryPendulum-IsaacLab Feb 2025 – May 2025

- Modeled the QUBE-Servo 2 from CAD with a DC motor and quantized encoders at 500 Hz.
- Trained a PPO policy on 4,096 robots in 64 minutes to tune six cascade-PID gains at 100 Hz.
- Validated on 256 randomized robots: 0.40 s swing-up, 0.23–0.50 s settling and at most 1.4° median overshoot.

SKILLS

Programming

Python, C/C++, MATLAB (Simulink, Simscape, RL Toolbox)

Reinforcement Learning & Control

PPO, SAC, reward design, hyperparameter tuning, cascaded PID, LQR

Robotics & Simulation

NVIDIA Isaac Sim, Isaac Lab, PhysX, ROS 2, URDF, ESP32

Machine Learning & Vision

PyTorch, TensorFlow, Keras, scikit-learn, OpenCV, YOLO

Tools

Git, GitHub, Linux, Conda, Jupyter/Colab, pytest

Languages

Vietnamese (native), English (TOEIC 715/990)

CERTIFICATIONS

TOEIC Listening & Reading:

715/990, IIG Vietnam

2025
